Marine Trailers

Your craft represents a meaningful investment, as does your car. Doesn't it make sense therefore to ensure that the trailer you choose to carry your boat and pull behind your car not only has excellent and stable towing characteristics but actually enhances your chosen leisure pursuit?

Indespension Marine Trailers have been designed to save you time and effort when launching and recovering. The Coaster, Roller Coaster and the Super Roller Coaster range of roller trailers in particular mean you really do spend more time on the water and less on the slip - they look good too. Indespension were the first company to introduce the concept of multi roller trailers to the UK over 20 years ago and by continually working with boat owners and builders have refined the design and construction. Computer Aided Design has helped to devise the demanding specifications we need to combine strength with the maximum towing capacity and roller configurations that will cradle your craft in transit and let it slide gently into the water with little effort.

Road going stability is tested way beyond normal performance limits on a special test track in Leyland, Lancashire where trailers are subjected to trials over a variety of punishing surfaces and at excessive speeds. The requirement for every new trailer design to pass a range of stringent tests is your reassurance that Indespension Marine Trailers will give you many years of trouble free enjoyment.

Further peace of mind that comes from owning an Indespension trailer is, that wherever you are situated, you won't be far from an Indespension store, service centre or independent stockist.

Call now on 0845 3 720 720 for your nearest stockist...

- Only Indespension provides a nationwide network of stores and stockists throughout the UK, providing parts availability, servicing, towbar fitting and after sales service.
- Indespension have been market leaders in the UK and Ireland in the boat trailer industry for over 20 years. Our reputation for quality of design and service is second to none.
- Providing quality launch and recovery, and safe towing for the boat user, marine industry, commercial operator, the military, sailing schools, rescue institutions and emergency forces throughout the UK, Ireland and Europe.

The Merit

Introduced to offer a budget priced 'A' Frame trailer to owners of smaller craft. That does not mean we have cut any corners when it comes to integrity of construction, durability or performance. The fully galvanised 'A' Frame will last for years whilst SoftRide suspension and wide carpeted bunks provide all the support and protection you want for your craft.

There are two Merit models, one for small boats and rigid hull inflatables and another specifically designed to accommodate soft bottom inflatables.

The price of the Merit range is kept low by enabling the customer to choose the optional extras most suited to their application.

The Coaster

Coaster is the popular choice for boat owners looking for the level of quality usually associated with much larger trailers.

The Coaster Micro is particularly suited to the sports rib market with its big brothers, the Mini and Coaster boasting enhanced features and performance that make it exceptional value for money.

The Coaster models have delivered excellent launch and recovery to sailors on slipways and beaches throughout the UK and Ireland.

STAR FEATURE

The adjustable drawbar on all the Coaster models not only allows the perfect set up for all kinds of craft and towing vehicles, but also slides under the main chassis making it much shorter and easier to store in domestic garages.

The Roller Coaster

(Single Axle)

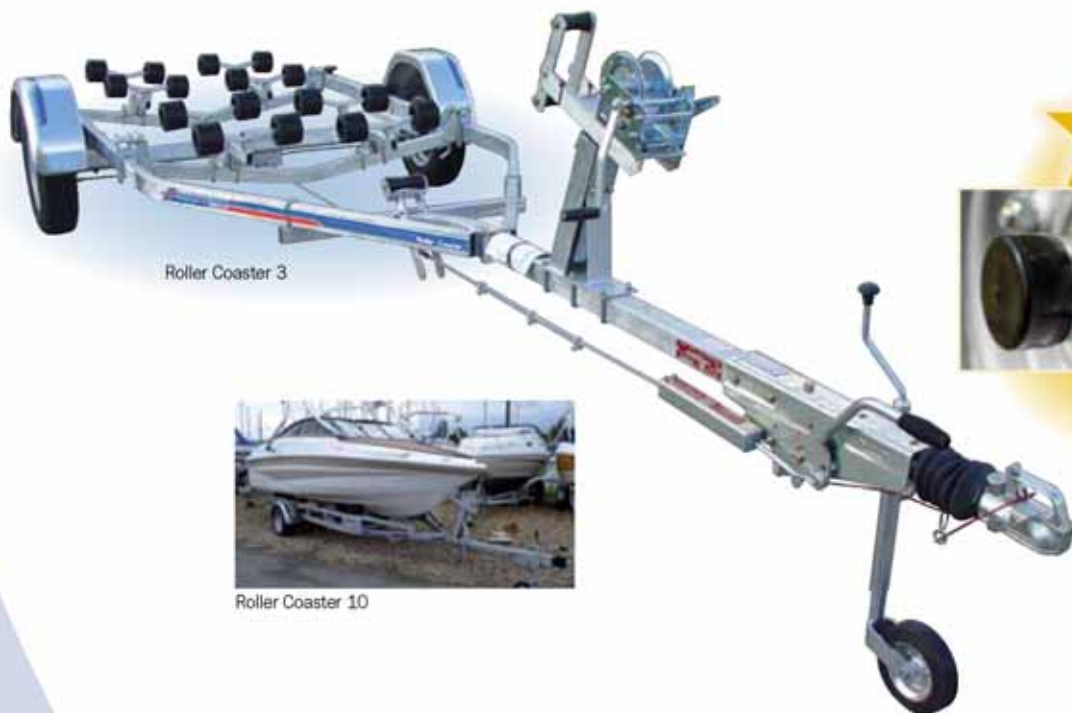

This is the trailer that set new performance standards for the marine market when it was introduced by Indespension over 20 years ago. It has been copied but never matched and our policy of continuous improvement means it is now better than ever before.

With the famous swinging beam (both front and rear on larger models), Roller Coaster really does mean that launching needs no more than a push and recovery is effortless even in choppy conditions.

Only Indespension manufacture rollers with nylon bushes on an aluminium shaft to ensure free running and perfect cushioning to protect your craft in transit or storage. A lighting board and winch are standard fittings together with a telescopic winch post incorporating a quality bow snubber for positive location.

**Will it suit
my boat?**

Lengths from 4.9m to 6.7m
Weights from 520Kg to 1200Kg

Roller Coaster 3

Roller Coaster 10

STAR FEATURE

All braked models are fitted with our unique 'Super Hub' system designed to withstand the problems of salt water corrosion. A triple RT.F.E. seal combined with the pressurised lubrication of a bearing saver allows the 'Super Hub' to protect the bearings and ensure a longer life whilst still offering easy access for maintenance and lower service costs.

Roller Coaster 1.3

Call now on 0845 3 720 720 for your nearest stockist...

The Super Roller Coaster

(Twin Axle)

Roller Coaster's big brother, this magnificent twin axle range includes all the outstanding features of its stable mate with several additional benefits.

The solid 'A' Frame design, double side rail and reinforced stress points provide a carrying capacity of up to 2650Kg and mean that for sheer strength of construction and stability on the road, Super Roller Coaster is unbeatable.

Galvanised mudguards protect the hull from spray and mud when towing and your boat is supported by multi-roller cradles front and rear.

The Dipper

(Single Axle)

Offering extraordinary value for money, the Dipper range perfectly demonstrates the benefits that the advance design and manufacturing capability of Indespension brings to marine trailers.

A triple-pivoting keel roller assembly helps guide your boat aboard whilst keel rollers along the length of the trailer provide total keel support. Wide carpeted bunks cushion and protect the hull.

Dipper's generous specification leaves little to be desired. A tough and rugged galvanised chassis, SuperRide suspension and 'Super Hub' seals are all included. The standard package also includes a winch, lighting board and smart decals.

Personal Watercraft and Small Boat Trailers

Although originally designed for Personal Watercraft, these trailers are ideal for smaller ribs, boats and tenders.

The JS02 standard model, suitable for 'stand up' skis has bunks that allow your craft to slide easily up to the bow snubber which will provide firm support during transit. Further protection is provided by the SoftRide suspension that cushions the craft even when towing over rough ground.

The Super Roller

When you want to get onto the water as quickly as possible - and who doesn't - then the JS05 Roller model is for you. The roller system allows you to reverse to the waters' edge and just push to launch. Recovery is just as fast - manoeuvre the bows into the cradle, attach the winch strap and simply wind her on board. Even the jockey wheel is pneumatic so the trailer can be more easily pushed over sandy surfaces.

As well as making launch and recovery fast and easy, the roller system gently cradles your craft whilst on the move supporting the hull in several places so that the load is evenly spread. Add to this the smooth towing provided by the SoftRide suspension and you can see that your valuable craft is well protected. A wide wheel version is available for beach launching.

Features

for the Indespension Marine Trailer Range

All Indespension Boat Trailers are hot dip galvanized for protection against the elements especially the corrosive effects of seawater

Bunks are covered with saline resistant carpeting and fully adjustable to make sure your boat is correctly supported

All braked trailers are fitted with sleeved, stainless steel brake cables to avoid binding problems due to corrosion

The Indespension cradle system provides support by distributing weight evenly over the rollers so applying minimal pressure to the hull. In fact, they work so well that individual rollers can be turned when a boat is on the trailer

Only Indespension rollers have nylon bearings and aluminium shafts to ensure free running and perfect cushioning for your craft

A fitting system for the lighting board is quick and easy to use whilst providing greater security

Mast supports are fitted as standard on all Indespension Dingy Trailers
